Art Unit: 1762

1. Claims 1-29 remain in the application.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-29 are rejected under 35 U.S.C. 103(a) as being unpatentable over Applicant's admitted state of the art (specification, pg. 1-2 and Fig. 1) in combination with Dahn et al. (4,959,282).

Applicant's admitted state of the art (specification, pg. 1-2 and Fig. 1) teaches preparing a coating solution of a lithium compound and an aluminum isopropoxide solution, mixing, removing from mixer and air drying, heating and then sieving to achieve a coating of an aluminum oxide on the lithium compound.

Applicant's admitted state of the art (specification, pg. 1-2 and Fig. 1) fails to teach mixing and drying the lithium compound coated with the aluminum isopropoxide in the mixer.

Dahn et al. (4,959,282) teaches a cathode active material for electrochemical cells whereby manganese particles are coated with a lithium compound in a mixer and during agitation a drying step is performed simultaneously.

Art Unit: 1762

Therefore, it would have been obvious at the time the invention was made to have modified Applicant's admitted state of the art (specification, pg. 1-2 and Fig. 1) by incorporating a combined mixing/drying step as evidenced by Dahn et al. (4,959,282) because of the advantages associated therewith such as a better distribution and even coating of the particles.

Double Patenting

3. Claims 1-29 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 11-24 of copending Application No. 09/897,445 in view of Yahagi et al. (5,939,043). The only difference between the claimed inventions is that the instant claims require coating and drying the lithium compound with an organic solution in a mixer. Yahagi et al. (5,939,043) teaches forming a lithium compound by mixing the powders in a ball mixer to form the compound.

This is a provisional obviousness-type double patenting rejection.

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).
